

JDF 1.6 is now released

CIP4 is pleased to announce the releases of a new version of the Job Description Format (JDF) specification. The Version 1.6 specification is now available at www.cip4.org. In addition to incorporating a number of technical enhancements and additions, this new version is backward compatible with JDF 1.5 and previous versions. CIP4 has also begun the process of creating an online Integration Matrix enabling JDF users to quickly identify vendor pairings that have already been successfully integrated, a tool that will be helpful to users seeking new solutions to integrate within an existing business and/or production workflow.
