

JDFToolbox

The JDFToolbox is a set of JDF Tools. The major tool in box is **CheckJDF**. CheckJDF enables you to validate JDF Documents. As a result you will get a report of issues. **FixJDF** is another tool in the JDFToolbox. Using FixJDF you are able to convert JDF Documents between the different versions. Both features are also available in the **JDFEditor**. A stand alone version of these tools is available at: <https://toolbox.cip4.org>
